DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 and 31-32, drawn to a system for controlling the migration of data using an adjustable value, classified in class 709, subclass 235 – congestion avoiding.
- II. Claims 8-14 and 26-30, drawn to a system for transferring data from a client device to a central storage location based on a preset/stored value, classified in class 709, subclass 228 – session/connection parameter setting.
- III. Claims 15-25 drawn to a system for selecting users for deployment of a new software feature, classified in class 709, subclass 229 – network resource access controlling.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as because it is directed to data migration and can be used in systems which do not use a hashing function. See MPEP § 806.05(d).

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be

separately usable. In the instant case, invention I has separate utility such as because it is directed towards data migration and can be used in systems that do not deploy software features. See MPEP § 806.05(d).

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as because it is directed towards data migration from client to server and can be used in systems that do not deploy software features. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and different searches are required for each group, restriction for examination purposes as indicated is proper. The search for the invention of Group I would require considering class 370, subclass 229 (Data flow congestion prevention or control), while the searches for Groups II and III would not. The search for the invention of Group II would require considering class 707, subclass 1 (Database or file accessing), while the search for Group III would not. The search for the invention of Group III would require considering class 717, subclass 172 (Including the distribution of software), while the searches for Groups I and II would not.

Applicant is advised that the reply to this requirement to be complete **must include an election** of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

A shortened statutory period for response to this action is set to expire **one month (not less than 30 days)** from the mail date of this letter. Failure to respond within the period for response will result in ABANDONMENT of the application (see 35 U.S.C. 133, M.P.E.P. 710.02, 710.02(b)).
